 Tumble Dryer	240 cycles per year (over 4 cycles per week) 4,800 cycles over 20 year lifetime	2.50 (Per cycle - based on an average load of 4.75Kg)	600	12,000
 Washing Machine	335 cycles per year (over 4 cycles per week) 6,700 cycles over 20 year lifetime	0.63 (Per cycle - based on average load of 2Kg)	211	4,220
 Fridge Freezer	24 hours per day (365 days per year) 175,200 hours over 20 year lifetime	1.12 (Per day)	408	8,160
Total Kwh For Specified Appliances			1,726	34,520

Assumptions

These figures assume that you have south facing 250W polycrystalline solar panels, tilted at an angle of 15°, you pay 14.05p per unit of electricity (Standard rate as of February 2015 source: Energy Saving Trust) and 100% of the solar electricity that you generate will be used in your home. Calculations assume an annual energy price inflation of 10% & include solar radiation & system losses, in a western UK location, due to Temperature 6.8% and Angular Reflectance 2.9%, as well as other losses (e.g. Cables, Inverter) of 12%. Figures obtained from www.solarguide.co.uk/solar-pv-calculator. The performance of solar PV systems is impossible to predict with certainty due to the variability in the amount of solar radiation (sunlight) from location to location & from year to year. This estimate is based upon the Government's standard assessment procedure for energy rating of buildings (SAP) and is given as guidance only. Illustrative solar PV performance figures only. Figures are given in good faith but do not constitute "Financial Advice". Yearly PV output uses a factored degradation over time based on industry estimates. Photovoltaic Panels will not be shaded (e.g. by Trees or Buildings) as shading affects PV output. Specific appliance ratings and equipment age will affect energy consumption and these examples are guidelines only. Appliance consumption information from Center for Sustainable Energy (www.cse.org.uk). Based on A-Rated (or higher) appliances.
